

Initial Assessment to Certification Roadmap

v1.0 · ISO/IEC 27001:2022

*Estimate based on scope and remediation complexity, not a fixed certification-body figure like stages 03-06.

The operating period is the only phase that cannot be compressed. Everything else is negotiable.

THREE DECISIONS THAT SET YOUR DATE

How long an operating period?

Three months is the shortest defensible first period for most controls. Certain controls (e.g. annual reviews) may need longer to show a real cycle.

When does evidence collection start?

The day the operating period opens, not the day Stage 1 starts. Controls with a monthly cadence need multiple cycles on record before audit.

Is a gap analysis needed before remediation?

If the initial risk assessment already surfaced clear gaps with owners, a separate gap analysis phase may be unnecessary — remediation can start directly.
